

LLOYD JOSHUA A. DE LARA

Junior Web Developer • Aspiring Systems/Business Analyst

0947 817 3485 | delarralloydjoshua4@gmail.com | Pulilan, Bulacan | github.com/Juicewaaa4 | linkedin.com/in/lloyd-joshua-de-lara-0a1175312

PROFILE

BSIS graduate with hands-on experience building full-stack web and mobile applications using React, Django, and Flutter. Comfortable across the stack from UI design and frontend development to database design and systems analysis with a project portfolio spanning task-management systems, ML-driven forecasting, and enterprise-style information systems. Seeking a Junior Developer, QA, or Systems/Business Analyst role where I can apply both my technical and analytical skills.

SKILLS

- **Languages & Programming:** Python, Java, C#, PHP, JavaScript, Kotlin, HTML, CSS
- **Frameworks & Libraries:** React, Django, Flutter, Laravel, FastAPI, .NET (WinForms/WPF, MVVM), Jetpack Compose, TailwindCSS
- **Databases & Data Tools:** PostgreSQL, MySQL, SQLite, Firebase Firestore, Prophet, XGBoost
- **Tools, APIs & Reporting:** Git/GitHub, Node.js, Firebase Auth, PDO, QuestPDF, ClosedXML, Resend API
- **Analytical & Soft Skills:** Systems Analysis, Requirements Gathering, Problem-Solving, UI/UX Design

OJT / INTERNSHIP EXPERIENCE

Street Foods Mobile POS System | Kotlin · Jetpack Compose · Firebase Firestore · Firebase Auth

- Built a mobile Point-of-Sale application on internship for a street food business client, with role-based access for Admin and Cashier and a Material 3 interface using Jetpack Compose.
- Migrated the app's data layer from a local Room database to Firebase Firestore for real-time cloud sync, and added Firebase Authentication for secure role-based login.
- Implemented cost/profit ('puhunan') tracking per product, automatically computing net profit and surfacing it on an analytics dashboard alongside sales and best-seller stats.

CLIENT PROJECTS

Zoey's Eatery POS & Inventory System | C# (.NET 8, WinForms) · SQLite · ScottPlot · QuestPDF

- Built an offline-first POS and inventory system for a real eatery/store client, with LAN-based sync for simultaneous Admin and Cashier terminals.
- Implemented role-based access control, automated stock deductions with low-stock alerts, and Excel/PDF sales and audit reporting.
- Integrated real-time email login alerts via the Resend API and packaged the app as a self-contained deployment for easy setup on new machines.

Zoey's Billiard Hall Management System | PHP · MySQL · JavaScript

- Built a full business management system for a billiard hall client with role-based access (Admin and Cashier), covering table sessions, VIP/KTV rooms, and rental tracking.
- Implemented a reservations module with down-payment tracking and an audited void-management system requiring reasons for voided transactions.
- Delivered Excel export reporting for transactions, reservations, and income, and secured the system using PDO prepared statements and password hashing.

Arceo's Lugaw House POS & Inventory System | Kotlin · Jetpack Compose · Firebase Firestore · Firebase Auth

- Developed a mobile POS and inventory management app for a food business client, with a cloud-synced Point-of-Sale cart, raw ingredient inventory tracking, and role-based access for Admin and Cashier.
- Built an Admin suite covering product management, a daily expense book, monthly financial summaries, sales analytics, transaction history, and user activity logs.

Payroll System | C# WPF (.NET 8) · MySQL · MVVM · ExcelDataReader

- Developed a desktop payroll management application for a client that integrates real-time biometric attendance data with employee profiles and configurable pay rules to automate salary computation.
- Structured the system using the MVVM pattern with dedicated data access, validation, and reporting layers, and added Excel import/export for employee and payroll data.

Automatic Smart Roof System | Arduino (C++) · Rain & Light Sensors · Servo Motor

- Designed and programmed an Arduino-based automatic retractable roof for a client, using rain and light (LDR) sensors to open or close the roof without manual intervention.

- Calibrated sensor thresholds and wired LED status indicators (open/closed/moving), documenting the circuit and parts list for reproducible builds.

ACADEMIC PROJECTS

TaskRoute Tracker — Capstone Project | *React · FastAPI · Flutter · Prophet · XGBoost*

- Architected a full-stack task-tracking ecosystem with a React web frontend, FastAPI backend, and a companion Flutter mobile app.
- Built a hybrid machine-learning forecasting model (Prophet + XGBoost) to predict task durations from temporal patterns, KPIs, and location data, deployed for real-time inference.

Richwell Portal — Student Information System | *React 19 · Vite · TailwindCSS*

- Led frontend development of a multi-role student information system serving Students, Registrars, Cashiers, and Deans.
- Designed responsive, role-based dashboards with TailwindCSS and managed version control via Git feature-branch workflows.

BeReady — Disaster Readiness Web App | *Django · AI Integration*

- Developed a disaster-preparedness web application that delivers real-time safety information and guidelines using Django and integrated AI.

EDUCATION

Bachelor of Science in Information Systems (BSIS) | Richwell Colleges | Graduated: August 2026

Senior High School | Dampol 2nd National High School | 2021 – 2022
